Approved AI Sire Submission

Submitted by: _____

Farm/Ranch Name: _____

Address: _____

City: _____ **State:** _____ **Zip:** _____

Please provide the following information and documentation for each bull that you wish to have approved for AI.

Name of Bull: _____

AMGA Regs No: _____

Testing Lab: _____

Applicant must provide hard copy of both the actual DNA markers and the negative alpha - Monnocidosis test results before the sire will be approved. (If using Igenity, you must specifically order the "STR Parentage" test. This is compatible with other testing labs. AMGA will no longer accept the long Igenity DNA marker test, as it limits the ability to reference between labs.) The documentation, along with this form must be delivered to AMGA by USPS mail. Applications sent by electronic methods will be rejected without consideration.

These changes are being implemented in an effort to provide breeders with a more accurate management tool and to provide an orderly system for the Association to receive, record, and publish this information. Please keep a copy of this form and the markers and a-manno test results for your records.

Contact AMGA for more information.

Effective: March 1, 2023
